Dear Gavin,

Since 2003 we have had the privilege to provide residential energy efficiency consulting services for thousands of homes in the Okanagan and Thompson areas. Our services include consulting, modeling, testing, and certification for new and existing homes under the ecoENERGY, EnerGuide, Energy Star, Built Green, and R2000 programs.

Over the years we have consistently appreciated the high levels of energy efficiency and attention to indoor air quality that you meticulously design and build into all of your homes. As professionals in the industry, we applaud your commitment to quality, workmanship, comfort, and energy efficiency well over and above the required Building Codes. Each one of your homes is uniquely crafted with its own custom 'Parsons Family Homes signature' to provide the warmest and healthiest of living environments.

With respect to comfort and energy efficiency, here are just a few improvements (over and above the Building Code) that set your homes apart from the rest:

- Advanced framing techniques (OVE) providing higher than building code levels of insulation throughout the entire building envelope.
- EnergyStar rated windows and doors for optimum comfort and energy efficiency.
- Super air tight sealed building envelopes with Air Changes (ACH) of 2 or less @ 50pa pressure. 30% – 50% more sealed than comparable homes we test.
- HVI Certified Heat Recovery Ventilators (HRV). It is our opinion that HRV's are the most important piece of mechanical equipment in homes built today. They provide constant balanced ventilation to every room. They are the lungs of modern homes.

Thank you for your continued dedication in building healthy, efficient, and environmentally responsible homes.

Sincerely,

**Moris DiGiovanni, CEA**
